- Any segment can be use as the sustain point.

- This enveloppe is loopable, to use it as a complex LFO.

- You can zoom-in / out by using the « + » and « - » and the scroll in top right.

- CTRL + Click on a point allow to move a point with a very high precision.

Use a left-click to open this menu.

- For a maximum precision, time and level of each segment and total time can be directly entered by clicking on the value displayed. Ideal to set all segments to the same value, for example.

- Default time value is in *second*. Duration is theorically infinite (only Chuck Norris know the limit). So this enveloppe can run from 1 nanosecond to several minutes, hours... (all your life?).
